

DEMENTIA FRIENDLY COMMUNITIES

What is a Dementia Friendly Community?

A dementia friendly community helps people impacted by dementia to feel included and supported in the places they live, work and play. Members of a dementia friendly community learn about dementia so that they are more able to support those impacted by the disease and recognize that a person with dementia is more than their diagnosis. Everyone can take part in creating accessible, inclusive communities by making organizations, businesses, and community services welcoming, safe places for people impacted by dementia.

What is the Dementia Friendly Community Initiative?

The project assists communities in developing tailored approaches to supporting people impacted by dementia. The Alzheimer Society will facilitate a complimentary dementia information session or series at your workplace or organization. We will educate your group about the disease and build their confidence in communicating with someone impacted by dementia. We are available to strategize with you as you take steps to make your organization dementia friendly.

Dementia friendly community sessions are available to the general public, businesses, the professional sector and government representatives of all levels.

The Alzheimer Society of Manitoba invites you to help build Dementia Friendly Communities. Partner with us today to create better social and physical environments for people impacted by dementia.

To learn more about the project or to arrange for a dementia friendly information session contact:

Jennifer Licardo, Education Manager
